

RENAULT NISSAN MITSUBISHI

PRESS RELEASE – Paris/Yokohama/Tokyo, September 18, 2018

RENAULT-NISSAN-MITSUBISHI AND GOOGLE JOIN FORCES ON NEXT-GENERATION INFOTAINMENT

- **World's leading automotive Alliance signs a global multiyear agreement to partner with Google to equip Renault, Nissan and Mitsubishi vehicles with intelligent infotainment systems**
- **The Alliance will utilize Android, world's most popular operating system, to offer customers a new array of services including Google Maps, the Google Assistant and the Google Play Store**
- **These services will be combined with Alliance Intelligent Cloud based remote software upgrades and vehicle diagnostics**

(Paris/Yokohama/Tokyo) - Renault-Nissan-Mitsubishi and Google today announced a technology partnership to embed the Android operating system in vehicles sold by the world's leading automotive alliance, providing intelligent infotainment and customer focused-applications across multiple models and brands, scheduled to start in 2021.

Under the technology partnership, vehicles sold by the Alliance members in many markets will utilize Android, the world's most popular operating system, and will provide turn-by-turn navigation with Google Maps, access to a rich ecosystem of automotive apps on the Google Play Store and have the ability to answer calls and texts, control media, find information, and manage vehicle functions with voice using the built in Google Assistant.

The Alliance, whose member companies last year sold 10.6 million vehicles in 200 markets, will integrate Google applications and services into infotainment and cloud-based systems to enhance the experience for customers of Renault, Nissan and Mitsubishi Motors brands. While a range of Alliance vehicles will share the Android platform, each brand will have flexibility to create a unique customer interface and specific features on top of the common Android platform.

The infotainment partnership forms part of Alliance moves to equip more vehicles with connectivity and cloud-based services as part of its Alliance 2022 mid-term plan. Today's announcement, coinciding with the first anniversary of the mid-term plan, symbolizes the Alliance focus on next-generation technology. Under the plan, Renault-Nissan-Mitsubishi is targeting increased sales of more than 14 million units a year by the end of 2022.

The plan also involves the launch of 12 new zero-emission electric vehicles, new autonomous-driving technologies and the ongoing rollout of the Alliance Intelligent Cloud.

The Alliance Intelligent Cloud will provide next-generation infotainment systems with secure connectivity by offering a platform to integrate data management, infotainment systems and to facilitate over-the-air upgrades and remote diagnostics in Alliance member-company vehicles.

By combining the latest technologies from the Alliance and Google, the Alliance member companies' vehicles will have one of the most intelligent infotainment systems in the market.

Drivers and passengers will be able to leverage Google and Android's capabilities to access an ecosystem that includes thousands of existing applications and an ever-expanding array of new apps.

This integration, combined with the broad knowledge and a vibrant community of developers, will enable easy in-vehicle access to popular applications. The system will also be compatible with devices running other operating systems, such as Apple iOS.

Hadi Zablit, Senior Vice President of Business Development at Renault-Nissan-Mitsubishi, said, "Our partnership with Google will offer owners of our vehicles rich user experiences that are currently available only outside the vehicle or, to a limited extent, by connecting an Android device to supported vehicles. We are building powerful connected and seamless on-board / off-board experiences into our vehicles in addition to the features of Google applications and services that many users are accustomed to, including Google Maps, the Google Assistant and the Google Play Store."

Kal Mos, Global Vice President of Alliance Connected Vehicles at Renault-Nissan-Mitsubishi, added, "With the integration of the Android platform into our infotainment systems, we are adding a new level of intelligence to our connected vehicles. In the future, the Google Assistant, which employs Google's leading AI technology, can become the main way customers interact with their vehicles, hands-free. With Google Maps and the Google Assistant embedded in Alliance infotainment systems, our customers will have some of the most advanced AI based applications at their fingertips. And with in-vehicle access to the Google Play Store, our customers will enjoy an open and secure ecosystem of Android apps engineered for vehicles."

Hiroshi Lockheimer, Senior Vice President of Platforms & Ecosystems at Google, said, "Google and Renault-Nissan-Mitsubishi share a common vision of delivering an intelligent, safe and seamless in-car experience with apps and services that are familiar, upgradable and connected. We're thrilled to partner with Renault-Nissan-Mitsubishi to bring the Google Assistant, Google Maps, and other popular apps via the Play Store and Android to drivers and passengers around the world."

- **ABOUT RENAULT-NISSAN-MITSUBISHI:**

Groupe Renault, Nissan Motor and Mitsubishi Motors represent the world's largest automotive alliance. It is the longest-lasting and most productive cross-cultural partnership in the auto industry. Together, the partners sold more than 10.6 million vehicles in nearly 200 countries in 2017. The member companies are focused on collaboration and maximizing synergies to boost competitiveness. They have strategic collaborations with other automotive groups, including Germany's Daimler and China's Dongfeng. This strategic alliance is the industry leader in zero-emission vehicles and is developing the latest advanced technologies, with plans to offer autonomous drive, connectivity features and services on a wide range of affordable vehicles.
